[Fitting Instructions](#) ➤

[Back to Contents](#) ➤

Fixing Kit Details

Fitting Instructions

Slide the brass ferrule over the fixing bolt so the counter sunk head fits into the counter sink of the ferrule then from the inside of the door, fit Nylon or Meal washer if required then push the bolt through the door, fit a washer if required then screw the threaded M8 ferrule to the fixing bolt from the outside, then fit the handles tightening the grub screws to secure.

Standard Letterplate

Meets the requirements of BS EN 1670:2007 Grade 5 (480 hours)
Flap cycle tested to 30,000 cycles Conforms to the requirements of BS EN 13724: 2002
Zinc construction with hardex coating.

Stainless Steel Letterplate

Cycle tested to 20,000 cycles
Corrosion tested in excess of 1,000 hours based on BS EN 1670
304 stainless steel construction

Stainless Steel Contemporary Letterplate

- Achieved 'Best in Class' BS6375-1 Weather Test results against air, wind and water.
Weather Test : Air Permeability: Class 4, Water Tightness: Class A9, Wind Resistance: Class 5
- Integral gaskets, brushes and telescopic liner for enhanced weather and draught protection.
- Built-in inner security flap helps prevent 'fishing'.
- Manufactured from 316 Grade Stainless Steel.
- Ideal for use where corrosion levels are high such as coastal environments.

Aperture Detail

Fitting in the bottom rail

Check online using the portal as it is sash height dependant.

Not available under the glass on the Georga, the Montana and the Newark.

TS008 Letterplate

Cycle tested to 20,000 cycles
 Corrosion tested in excess of 1,000 hours based on BS EN 1670
 White PVC-U internal
 304 stainless steel construction external
 Concealed hinge mechanism for attack resistance

Sideframe Letterplate

180 Opening
 Black plastic frame
 Aperture size 247mm x 28mm

Rockdoor Standard Hinge

Adjustable using a 4mm allen key.

Up/Down +/-3mm

In/Out +/-2mm

Left/Right +/-2mm

Open-in hinge pin Open-in hinge pin

Open-out Doors

Open-out doors are fitted with concealed grub screws. The grub screws engage into a groove in the hinge pin; this stops the hinge pin from being removed. The grub screws are only accessible when the door is in the open position.

Bull Ring Knocker

Stainless Steel Bull Ring Knocker

Bolt through fixing

Fitting Positions

All measurements are taken from the moulding to the centre line of the top hole.

Stainless Steel Knob

Fitting Positions 10mm Diameter Hole

Stainless Steel Door Pull

External

Internal

Hex Socket Cap Fixings x 2

Magnetic Cat Flap Available in White and Brown

Magnetic Lock

The magnetic operation requires no batteries the cat simply wears a collar key which is then used to open the locking mechanism of the cat door. Although not 100% secure (no cat flap is) this does help to keep out unwanted strays and other small animals.

4-way Locking

The 4-way latch offers the ultimate in flexibility. Set the cat flap to open, closed, in only or out only.

Manual Cat Flap Available in White and Brown

4-way Locking

The 4-way latch offers the ultimate in flexibility. Set the cat flap to open, closed, in only or out only.

Door Styles available with a cat flap:

- Aspen
- Stable spy view
- Stable view light
- Cottage spy view
- Cottage view light
- T & G 5
- Indiana
- Dakota

Cut out positions

AV-SLDR-A Open Out Restrictor

Door restrictors are designed to provide adjustable limitation to the door movement and allow an opening aperture of maximum 90°.

Features and Specifications:

- Tested to 100,000 cycles
- Corrosion resistance Grade 4 in accordance with BS EN1670:1998

Top edge of door machined off 3.7mm to allow for the restrictor arm.

Steel Reinforcement

Fix with screws 3.9 X 22

Installed 100mm in from the corner of the frame on the hinge side.

Furniture Colour Options

Polished chrome matches polished stainless.
 Polished gold matches gold stainless.
 Graphite matches brushed stainless.
 Midnight black, black stainless
 and wrought iron are all slightly
 different in colour finish.

4 Hook Lock

STV-FG 2060 M4

Drawing Description:

Dimensional Details Of Winkhaus' Standard STV Four Hook Residential Multi-point Door-lock System on a F20 rail.

When the door closes this pin is pushed back which throws the hooks out instantly securing the door from the outside.

AV2 with Lever/ Fixed D Handle

Locking from the inside

- Closing the door automatically throws the top and bottom hooks making the door instantly weathered and secure from the outside.
- The handle can still be operated from the inside for instant exit.
- Insert the key and rotate one revolution to deadlock the door. This throws the central deadbolt and blocks the handle from operating. The door is now fully weathered and secure.

Unlocking from the inside

- Insert the key and rotate one revolution. This retracts the central deadbolt and allows the handle to be operated. The door remains weathered and secure from the outside.
- Depress the handle to retract the top and bottom hooks and open the door.

Locking from the outside

- Closing the door automatically throws the top and bottom hooks making the door instantly weathered and secure.
- Insert the key and rotate one revolution to deadlock the door. This throws the central deadbolt and blocks the internal handle from operating. The door is now fully weathered and secure.

Unlocking from the outside

- Insert the key and rotate one revolution. This retracts the deadbolt.
- Turn the key a further 45 degrees to retract the top and bottom hooks and open the door.

Instant Lock Heritage Plus

Cylinder height centre is 1395mm from the bottom of the door sash.

The lock mechanism has 2 hooks, a central latch and a high-level cylinder position.

This is fitted with either a finger pull, or an escutcheon and a thumbturn internally.

The magnetic triggering of the automatic locking reduces stress marks on the door frame and dampens the closing noise of the automatic locking system.

The magnetic trigger and hook design also improves the reliability of the product, as it can work with slightly larger tolerances which can accommodate any slight door/frame movement over time.

Instant Locking

The Heritage plus system is an instant multi-point locking system with independently acting hooks.

The action of closing the door fully secures the door. There is no further action needed to lock the door.

To open the door the hooks and latch are retracted manually using a key or thumbturn, you are only required to turn a quarter of a turn.

Magnetic Switch Latch. (Different to standard switch latch)

UP position

When the switch latch is in the **UP** position, the door instantly locks upon closing. A key is required to regain entry to the property. The door can be opened internally with the thumbturn.

DOWN position

When the Switch Latch is in the **DOWN** position, no key is required allowing you to regain entry to the property and the door can open or close freely.

The door cannot be locked with a key or thumb-turn when the switch latch is in the down position. To lock the door move the switch latch into the up position and then close the door to lock.

Routing details for Instant Lock Heritage plus

FRAME

SASH

Up Position

When the Switch Latch is in the **UP** position a key is required to gain entry to the property. Don't get caught out and **lock yourself out**.

For total security, the key or thumbturn still needs fully engaging to ensure the hook locks are secured in place.

Down Position

When the Switch Latch is in the **DOWN** position no key is required allowing you to gain entry to the property and the door can **open or close freely**.

For total security, the key or thumbturn still needs fully engaging to ensure the hook locks are secured in place.

Unlike the magnetic switch latch fitted to the Heritage Plus lock the door can be locked in the down position.

Electric Latch Release

Fail **SAFE** Electric Latch Release (no power)

Fail **SECURE** Electric Latch Release (no power)

Technical Details (for Both Options)

Handing	Universal
potential	12 V DC
Adjustable latch (FF, FaFix®)	Yes
Fail-unlocked	Yes
Rated operating voltage tolerance range	± 1 V
Rated resistance	60 Ohm
Current consumption DC (50% Residual ripple)	225 mA
Current consumption DC (stabilised)	200 mA
Break-in resistance	3000 N
Height	90 mm
Width	16 mm
Operating temperature range	-15 °C to +40 °C
Max. keeper pre-load DC (50% residual ripple)	10 N
Max. latch preload DC (stabilised)	10 N
Depth	28 mm
Material housing	Zinc die-cast
Latch material	Zinc die-cast
Material surface-mounted attachment	MESSING

3 Star Cylinder

The cylinder must be installed with the sacrificial section to the external of the property.

FEATURES:

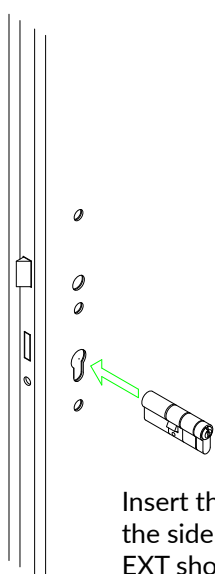

- SS312 Sold Secure Diamond Grade
- 3 Star British Kitemark - TS007:2014 (KM 586153)
- Secured by Design Accredited (Police preferred specification)
- Patented Snap Secure Technology
- Pick, Drill & Bump Resistant
- 6 Trap Pins for advance pick resistance
- 10 Anti-drill pins
- Three Rockdoor branded keys per cylinder
- Keyed alike key/key pairs are available ex stock
- Size 40mm/40mm

The key must be removed from the cylinder for the full security features to be enabled.

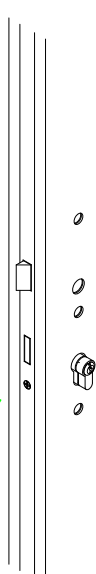

Cylinder Installation

1

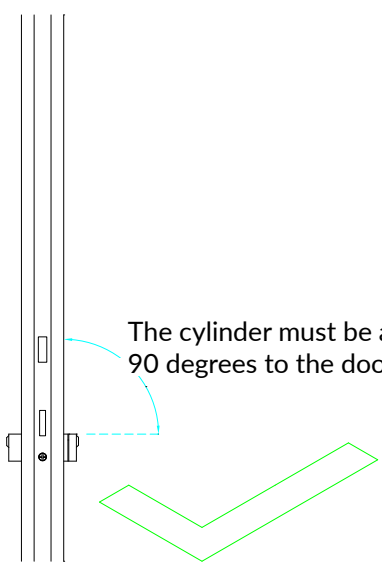

Insert the cylinder the side marked with EXT should be to the external face.

2

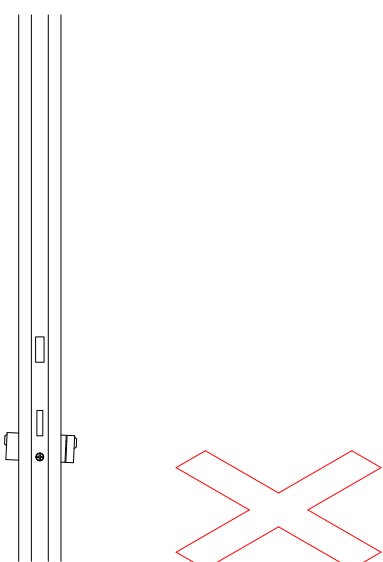

Insert fixing screw. The cylinder should be loose enough to ensure easy fitment of the handle.

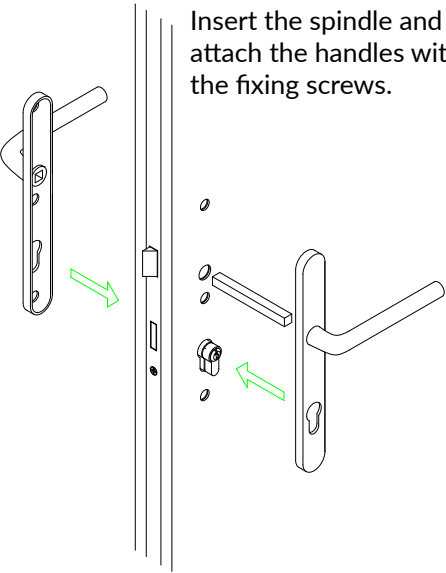

3

The cylinder must be at 90 degrees to the door.

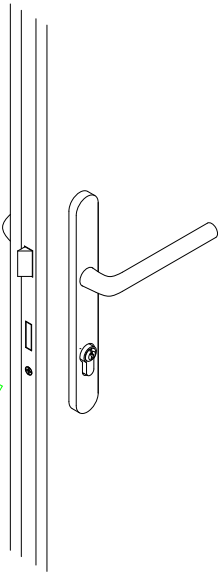

4

Insert the spindle and attach the handles with the fixing screws.

5

Nip tight the cylinder fixing screw with a hand screwdriver. Check the lock works correctly.

Emergency Exit Door

Rockdoors emergency exit door is customised with a hardware solution that allows the door to be opened quickly and easily in a 'panic' situation. This includes typical emergency exits used in public places such as shopping centres, schools, cinemas and commercial use buildings.

External Operation

Lock: To lock the door from the outside, the key provided must be used to wind out the bolts into position. If the door is locked from the inside the external handle will not open the door.

Unlock: To open the door from the outside, use a key to unwind the bolts and then open the door using the external lever handle.

Internal Operation

Lock: To lock the door from the inside, use the thumbturn to wind out the bolts.

Unlock: To open the door from the inside, push firmly down on the push bar which will instantly retract the locks and allow the door to open freely. This will open the door regardless of whether the door has been left in the locked or unlocked position.

High Security, Quick Escape

Our emergency exit door ensures buildings can remain extremely secure, whilst providing a quick and safe method of exit to members of the public.

When to use Emergency Exit Doors

In accordance with EN1125, Rockdoor emergency exit doors should be used as a single door set that members of the public will have access to. The high concentration of people makes 'panic' situations more likely in public buildings. The occupants will not necessarily be familiar with the locations of the emergency exits, or how to open them. They therefore need to be able to open the doors intuitively using the horizontal push bar.

Rockdoor emergency exit doors, in accordance with EN 1125, are always outward-opening doors. All emergency exit doors must bear the CE mark.

Door Specification:

1. Door styles

All door styles except stable doors and double doors.

2. Glazing

P1A compliant glass (6.8mm Laminated)

3. Outer frame

72mm Rehau Outer frame or 52mm Rehau Outer frame

4. Reinforcing

Security Mesh

5. Handle

Standard lever/lever handle or Bar Handle

6. Hinges

Standard 3D Rockdoor hinge

7. Lock

Winkhaus 2 hook lock

8. Cylinder

Standard Rockdoor 3 star cylinder

9. Keeps

Standard Rockdoor full length keeps

10. Threshold

Aluminium low threshold

11. Letterplate

Must be TS008 compliant

Methods of test.

1. Operating Forces

The operating forces acting on the sample were determined by the methods given in BS EN 12046-2:2000.

2. Air Permeability

The air permeability of the sample was determined by the method given in BS 6375-1:2015.

3. Watertightness

The watertightness of the sample was determined by the method given in BS 6375-1:2015.

4. Wind Resistance

The wind resistance of the samples was determined by the methods (P1 and P2) given in BS 6375-1:2015.

5. Repeat Tests

After testing for resistance to wind loading (P1 and P2) the air permeability test was repeated.

6. Wind Resistance

The wind resistance of the samples was determined by the method (P3) given in BS 6375-1:2015.

7. Resistance to Vertical Loads

The resistance to vertical loads test was carried out using the method given in BS EN 947:1999.

8. Resistance to Static Torsion

The resistance to static torsion test was carried out using the method given in BS EN 948:1999.

9. Soft and Heavy Body Impact

The resistance to soft and heavy body impact was carried out using the method given in BS EN 949:1999.

10. Hard Body Impact

The resistance to hard body impact was carried out using the method given in BS EN 950:1999.

Results of test.

1. Air Permeability

The test sample met the requirements of the Specification, in respect of Clause 6, for Test Pressure **Class 4**.

2. Watertightness

The test sample met the requirements of the Specification, in respect of Clause 7, for Test Pressure **Class 3A**

3. Wind Resisatance

The test sample met the requirements of the Specification, in respect of BS6375-2:2009, for Exposure Category **C3 (1200Pa)**.

4. Operational Strength

The test sample **met the requirements** of the Specification in respect of BS6375-2:2009.

5. Basic Security

The test sample **met the requirements** of the Specification in respect of BS6375-3:2009.

Secured by Design (SBD) is the official police security initiative that works to improve the security of buildings and their immediate surroundings to provide safe places to live.

For Rockdoor to meet the specification they should be fitted with:

- 1 P1A Compliant glass (6.8mm laminated)**
- 2 Security mesh.**
- 3 Letterplates must conform to requirements of TS008.**

For solid door styles with no glass, please refer to the Clear Backing glass section for the doors energy rating

WHAT CREATES CONDENSATION?

Water vapour content in the air

This is produced by normal living activities such as washing, cooking, bathing, etc., and can be controlled using extractor fans, cowlings, and ventilation at appropriate places.

Inside room temperature

This can be controlled to some extent, thereby maintaining a higher surface temperature of items in the room, and by increasing the air temperature to enable it to hold more water vapour without condensing.

Coldest surface in the home

Modern aids to home comfort have created rooms which are warmer, but which often have less ventilation and fewer air changes. The result is that the water vapour produced by normal living activities, is no longer able to escape up the chimney or through door jambs, window joints and other outlets.

In certain circumstances, all these aids to comfort combine to create ideal conditions for the formation of condensation, which could form on the coldest surfaces within the home.

What is the coldest part of a Rockdoor.

Thermally efficient PVC-U skins, a 50mm thick sash, S-Glaze, performance gaskets, Multi chamber PVC-U door frame and high-density polyurethane foam work together to achieve industry leading thermal performance ratings.

However, there are areas on a Rockdoor that when the outside temperatures are low can be colder than other areas, especially if the internal temperatures are also low.

These areas are the locking cylinder, the hinges, Aluminium thresholds, and the area where the aluminium reinforcement is inside the door (around the perimeter).

If the conditions for condensation are present, it can start to appear on the above parts of the door.

Examples of where water vapour comes from

Breathing: Two sleeping adults produce approximately 1 litre of moisture in 8 hours, which is absorbed as water vapour into the atmosphere.

Cooking: Steam clouds can be seen near saucepans and kettles, and then seem to disappear. The clouds have been absorbed into the atmosphere. The heat source itself may be a source of water vapour, e.g. an average gas cooker could produce approximately 1 litre of moisture per hour.

Washing up: Vapour clouds given off by hot water are rapidly absorbed into the atmosphere. Bathing, laundry, and wet outer clothing: these are often major sources of water vapour in the home.

Heaters: A flueless gas heater can produce up to 350cc of moisture per hour. Paraffin heaters produce 4 litres of moisture for every 3.5 litres of fuel burned.

Indoor plants: A frequently unrecognised but nevertheless significant source of water vapour.

New property/building work: The bricks, timber, concrete, and other materials in an average 3-bedroomed house absorb about 7,000 litres of water during construction. Much of this is dissipated into the indoor atmosphere during the drying out period.

How do you reduce the condensation in the home?

- It is important to remove excess moisture by ventilating rooms.
- A room can be ventilated without making draughts or causing it to become cold. One way to do this is to open the window slightly or use the trickle vent if fitted.
- By opening windows or ventilating your home it may appear that you are losing some heat, but what you are doing is allowing warm moisture laden air to escape and permitting cool dry air to enter your home. Dry cool air is cheaper to heat than warm moist air.
- Provide natural ventilation through an opening section of the window, through a proprietary ventilating unit, or through an airbrick. Check that trickle vents are in the open position.
- Where there is no open fire, or where existing flues have been blocked off (and cannot be unblocked), ensure that wall vents are fitted and kept clear.
- Open at least one window in each room for some part of the day to permit a change of air. Ensure permanent ventilation of all rooms where gas and oil heaters are used. NOTE: This is a statutory requirement which will be monitored by the heating engineer.

- Fix hoods over cookers and other equipment producing steam and ventilate them to the outside air.
- Ensure that bathrooms and kitchens are ventilated in accordance with National Standards.
- Draught proof internal doors and keep them closed, to prevent transfer of air with high water vapour content from the main moisture producing rooms –kitchens, bathrooms, and drying rooms. It should be borne in mind that water vapour does not remain in the room where it is first generated but tends to migrate to other parts of the home generally where the rooms are colder.
- Increase slightly the air temperature within the room where the condensation occurs.
- In cold weather, keep some form of heating on permanently in the room where the condensation occurs.
- In winter months to help with atmospheric moisture control the introduction of a dehumidifier will help maintain a healthy living space and help reduce the chances of condensation forming on cooler surfaces.

Summary

Whilst we pride ourselves on creating a thermally efficient industry leading door, it is important we raise awareness to customers on the issues experienced by all window and door manufacturers. The nature of modern-day living has created cosy warm homes where moist damp air is stored, but it is this damp air that manifests itself as condensation unless the air is dealt with and removed from the property. This issue is highlighted by the government's building regulations that now stipulate the use of trickle vents on all newly installed windows, both in new build house and replacement windows.

Replacement Parts

To ensure you receive the correct replacement part, you firstly need to find the Rockdoor production number of the door that requires parts. This can be found on the hinge side of the inner frame and is a 6 or 7 digit reference number. Contact can then be made to GAP's customer service team (customerservice@gap.uk.com) who can help you.

Our team can then use our systems to find the correct part for the door and arrange for its delivery to the depot.

With lots of parts used to construct the door, it's useful to make sure we have the correct part, so please refer to the illustration below.

The Original **Composite Door**.

Rockdoor must be installed in-line with the five star installation guide. ★★★★★
